

AMENDMENTS TO THE SPECIFICATION

Page 2, first full paragraph, delete in its entirety, and replace with the following:

This type of a junction box 101 is constituted of a lower cover 102, a bus bar 103 attached to the lower cover 102, and an upper cover 105 which seals the lower cover and bus bar and to which a connector, fuse, and the like are attached. In the junction box 101, as shown in FIG. 24, the bus bar 103 formed, for example, of a pressed/punched metal plate of copper alloy, aluminum alloy, or the like is used to branch the wiring. Moreover, the junction box 101 also includes a function, for example, of a fuse box, when a fuse ~~107~~108 is incorporated halfway in the wiring circuit constituted by the bus bar 103.
